Feeding

FOOD	AMOUNT	MEALS A DAY	NOTES
Purina Pro Plan Puppy, chicken and rice	1/2 cup	4	Soaked in warm water for ten minutes and mashed. Still doing this at go-home.
Goat milk, plain	2 tbsp	1	Over the morning meal only.

She goes home on the food she is eating here, and there is a week of it in the bag. If you want to change it, change it slowly — a quarter of the new food for three days, then half, then three-quarters, then all of it. Loose stool for a day after a switch is normal; loose stool for three days is a phone call to your vet.

Four meals a day until twelve weeks, then three until six months, then two for life. Free feeding does not suit this breed.

From the breeder

Thank you for choosing one of Mabel's puppies. They were born in our kitchen on a cold night in February and they have not been alone since.

What I ask of you is simple. Keep her lean — you should feel her ribs without looking for them. Keep her mind busy, because a bored one of these will make her own entertainment and you will not like it. And take her somewhere new every week until she is a year old, even if it is only the hardware store parking lot.

What I promise you is this: I will take her back. At any age, for any reason, with no argument and no questions. If your circumstances change in eight years, she comes home to me rather than to a shelter. That is not a courtesy — it is the whole reason I breed.

Call me before you call anyone else. Day or night, for as long as she lives.

— Ellen

Juniper was the first one out of the box every single morning. Give her a job by six months or she will find one.
